Que Media's Marquis Line offers a wide variety of color laser/digital printable solutions for your POP, shelf marking, labeling, and specialty needs.

Que's materials are compatible with most laser and digital presses and printers. With the various toners and feeding mechanisms on the market today, we recommend consulting your technical guide regarding heavy stocks and fuser temperature. We may also recommend testing your choice of media to ensure compatibility.

951.808.5432 | monarchdiecutsolutions.com

Que Media's go-to for your custom laser & die cutting needs!

Monarch Die Cut Solutions exists to support Que Media's customer's in need of laser and die cutting services. Monarch produces standard sheets, unique stock, custom laser & die cut sheets and label rolls. Our core focus is helping major distributors create projects that build dynamic connections with their regional retailers and label printers in need of unique label cuts/shapes or roll material. We provide a creative, low cost solution that provides flexibility for local price points.

Monarch can also pre-cut unprinted or post-cut printed labels in rolls. UV coating and lamination are also options. Monarch parteners with a variety of substrate manufacturers and can find the right material, coating and adhesive to suit your projects needs.

- **Rotary die cutting** provides our customers with high-quality sheets or rolls. Our process allows us to provide perforated, scored and/or kiss-cut to liner products to suit your unique requirements.
- **Laser cutting** is available for your prototyping or short-run needs. Our laser cutting can provide perforated, scored and/or kiss-cut to liner products.

DESIGN SPECIFICATION REQUIREMENTS FOR CUSTOM DIE CUTTING

Provided file format: PDF, EPS, AI, DWG, vector based art preferred. Design template can be provided upon request.

Considerations within the design: Lines indicate a laser "cut", so they need to start and stop with no layered boxes over these lines. Do not leave elements grouped.

Color-coded lines or element call-outs need to be visible on the design layout.

Custom designs will go through a sign-off approval process prior to production.

Perforation: Product will be as micro-perforated as possible, but will be created to work successfully with: sheet tension, material thickness, and other design aspects. Most common designs will be created using 8-1/2" x 11" sheets size. How this design runs through the converter (either portrait or landscape), will need to be determined at the time of the design review. As well, there may be a need to create additional "release" cut lines to help the item pull away from the sheet.

Tolerances: Design tolerances can vary by 1/32" in either direction. Additional variation may occur during the printing process and should be tested prior to launching major printing projects.

Timeline and conditions: Lead times are 10 days from job approval (including sign-off on the design.) Custom die cutting jobs will be charged by the sheet. Sheet count can vary over-or-under by 10%. Additional sheets will be charged; less sheets will be reduced from the final invoice.

1000 sheets or less will be charged $250 setup fee.

1001 sheets or more will be billed for the die at cost - a copy of the invoice can be provided upon request.

Que Media has developed these products to match the requirements for the following laser printers:

hp OKI LEXMARK DELL SAMSUNG brother xerox

Our materials are compatible with most laser printers. With the various toners and feeding mechanisms on the market today, we recommend consulting your technical guide regarding heavy stocks and fuser temperature. We may also recommend testing your choice of media to ensure compatibility.
