Use this same method for applying QM-TASQUE to a table top or on the floor.

*Try on a small inconspicuous area FIRST to make sure adhesive does not damage the surface*

1. Wipe down entire area before application. Use filtered water with no chemicals. Use 10% alcohol solution for dirty areas.

2. With the print side down, pull back the liner about 8 inches from the top exposing the adhesive. Crease liner as shown.

3. Starting at the top of the table, position the exposed adhesive side to the table flush with the edge. Burnish TASQUE with the roller/squeegee working from the center outward, side to side pushing out any air pockets, as you pull the liner out directly toward the floor. DO NOT INSTALL IN DIRECT SUNLIGHT TO AVOID HIGH TEMPERATURES DURING INSTALLATION.

4. Continue this method until reaching the end of media.
